energy has become an essential resource for today's industrial societies in particular the availability of electricity is essential for the functioning of almost every sector of modern civilization be it in industrial production transportation communication housing healthcare or any other sector conceivable the effects of insufficiencies in the electricity supply system were shown dramatically through the blackouts in europe and the u s a in 2003 therefore a timely and accurate planning of construction and deployment of power plant capacities is essential among all the decisions connected to the investment in a new power plant the choice of fuel stands out this decision will impact the profitability of a power plant until its very last day of operation and particularly for nuclear plants even beyond unfortunately future paths of fuel prices and co2 emissions costs are far from certain and thus investment decisions are taken under considerable uncertainty fossil fuel prices are determined by multiple key drivers e.g. not only of geological economic technological and environmental but also of geopolitical and

financial nature each key driver bears an element of uncertainty concerning its future development usually with the degree of uncertainty increasing over time any deterministic forecast of future developments of fossil fuel prices especially for such long periods as required for power plant investments is highly prone to error on multiple dimensions this study describes a stochastic modeling approach aimed at analyzing the impact of selected uncertainties in the formation of fossil fuel prices and at depicting the probability range of prices on a 5 year basis until 2050 worldwide production and transportation of fossil fuels is analyzed based on the final energy demand in four demand sectors and seven geographic regions developments in energy conversion efficiency rates fuel production capacities transportation routes and costs as well as co2 emission costs are taken into account the ability to calculate a probability weighted range of prices is gained by implementing the most relevant key drivers and their related uncertainties as stochastic input parameters in a linear optimization

framework therefore the model follows a successive two step approach in a first step the expected development is calculated in an intertemporal deterministic optimization in the second step stochastic shocks are applied and restricted optimizations are carried out taking into account notably the locked demand and other constraints from previous periods as result the model delivers scenarios on global fuel production volumes and import prices for all geographic regions from 2005 to 2050 in 5 year steps it also can provide information on the development of fuel production capacities in each region finally the results for fossil fuel price corridors are applied to an existing model for investments in the german power generation market it turns out that for 2010 a high share of coal fired plants nearly 60 percent and a share of gas fired combined cycle plants in the magnitude of 30 percent is to be expected the rest is covered by lignite fired plants after 2010 the largest share of capacity investments is made in gas fired combined cycle plants comparing these stochastic results to those of a deterministic

optimization run it becomes obvious that the existence of uncertainties has an impact on optimal investment decisions uncertainty benefits technologies with low investment costs in this case gas fired power plants even though this type of plants is exposed to higher fuel price risks

the establishment of a middle east zone free of nuclear weapons a concept more recently broadened to cover all weapons of mass destruction wmd has been before the international community for decades in this book two experts from the region explore why the matter remains unresolved and outline a comprehensive yet achievable roadmap to a middle east free of wmd weapons of mass destruction pose an existential threat to global peace and security but nowhere is it more urgent to stem their spread than in the middle east a region fraught with mistrust and instability accounting for these geopolitical realities including the ongoing talks to curb iran s nuclear program the authors present a practical and innovative strategy to a middle east free of weapons of mass destructions

wmd they outline a phased approach toward disarmament in the region prescribing confidence building measures and verification tools to create trust among the region's governments their vision also sees the realization of a wmd free zone within a broader regional agenda for security and cooperation to advance socioeconomic and political progress this book will be of great interest to students and scholars of international relations politics and security studies in the middle east

war has been an ever present feature of human existence the analysis of wars has tended to focus on either their causes or the military and strategic consequences of a conflict this book argues that war can have a much wider impact across layers of society that go beyond international boundaries it presents a heuristic multi disciplinary framework for analysing the ripple and backwash effects across five connected analytical layers around the world material human capabilities economic values belief and attitudes policy and governance and power through this framework the book introduces a

set of empirically rich and theoretically informed studies which examine the first consequences of the war in ukraine following the invasion of russia in february 2022 this multi disciplinary approach shows that the effects of the war were much deeper and sustained this volume will be of interest to students and scholars of international humanitarian law security studies peace and conflict studies and european history the chapters in this book were originally published as a special issue of policy studies

trends in population growth suggest that global food production is unlikely to satisfy future demand under predicted climate change scenarios unless rates of crop improvement are accelerated this book provides an overview of the essential disciplines required for sustainable crop production in unpredictable environments

environmental law in arab states offers a comprehensive and authoritative account of the guiding principles and rules relating to environmental protection in the arab region

taking an international and comparative approach the book introduces readers to the latest developments of environmental law across the arab region through applicable legislation green finance and climate technologies the impact of these is assessed in each of the major areas of environmental regulation air pollution water pollution biodiversity conservation of nature and cultural heritage infrastructure development and islamic ecology consideration is given to participatory and bottom up legal strategies focusing on transparency accountability gender justice and other human rights safeguards that are needed to achieve greater coherence and coordination in the implementation and enforcement of environmental regulation across the region the book closes by providing legal assessments and reflections on how arab countries can through clear and comprehensive legislation advance existing national strategies and visions on trade and investment green growth islamic green finance circular economy blue economy and low carbon future amongst
