state formation after civil war offers a new model for studying the formation of the state in a national peace transition as an integrated national phenomenon current models of peacebuilding and state building limit that possibility reproducing a fragmented selective view of this complex reality placing too much emphasis on state building as design they place too little on understanding state formation as unplanned historical process the dominant focus on national institutions also ignores the role that cities and civic polities have played in constituting the modern state mining ideas from many disciplines and evidence from 19 peace processes including south africa the book argues that the starting point for building a systematic theory is to explain a distinct pattern to state formation that can be observed in practice despite their conflicts people in fragile societies bargain terms for peaceful coexistence they make attempts to constitute the right to rule as valid state authority in circumstances prone to conflict over which they have imperfect influence not control

though the kind of institutions created will differ with context how rules for state authority are institutionalized follows a consistent basic pattern that pattern defines state formation in peace transitions as both a unified if contingent field of normative practice and an object of comparative study where the national centric models see local government as a matter belonging to policy on decentralization for later in the reconstruction phase the book uncovers a distinct local government dimension to peace transitions a civic dimension to national conflicts that must be explained incipient or proto local authorities that emerge even during civil war in peace making after state collapse the fact that it is common for peace agreements and constitutions to include rules for local authority for local elections to be held as part of broader democratization and for laws to be enacted to establish local government as part of peace compacts the book develops the concept of local peace transition to explain the distinctive constitutive role of this local dimension in peace making and

looming trade wars and rising nationalism have stirred troubling memories of the 1930s will history repeat itself do we face the chaotic breakdown of the global economic system in the face of stagnation protectionism and political tumult jeremy green argues that although we face grave problems globalization is not about to end setting today s challenges within a longer historical context he demonstrates that the global economy is more

interconnected than ever before and the costs of undoing it high enough to make a complete breakdown unlikely popular analogies between the 1930s and today are misleading but the governing liberal ideology of globalisation is changing it is mutating into a hard edged nationalism that defends free markets while reasserting sovereignty and strengthening borders this national liberalism threatens a much more dangerous disintegration fuelled by inequality and ecological crisis unless we radically rethink the international status quo this brilliantly original account of the discontents of globalization is a must read both for concerned citizens and students of global political economy

american manufacturing has been on the decline for at least two generations that fact is plain to any observer who travels through the rust belt of the midwest where the closing of steel plants and automobile factories has created ghost towns that dot the landscape it is also clear from the dormant new england textile

mills whose owners surrendered their production first to cheaper mills in the southeast before they in turn lost out to asian labor what caused this calamity and what can be done about it andrew o smith argues that we lost our manufacturing not simply to forces beyond our control such as globalization and cheaper labor overseas but as the result of misguided policies that are well within our abilities to reform for the benefit of manufacturing examining six areas of public policy the tax system health care the legal system workers compensation government regulations and labor policy smith demonstrates that in each of these areas current policy choices have created a hostile environment for manufacturing grounding his arguments not in polemic or ideology but in historical analysis and current research smith illustrates his points with real world examples to show how a new social compact can fix the problems that manufacturers face without sacrificing public policy goals

have humans always fought and killed each other or did they peacefully coexist until organized states developed is war an expression of human nature or an artifact of civilization questions about the origins and inherent motivations of warfare have long engaged philosophers ethicists and anthropologists as they speculate on the nature of human existence in how war began author keith f otterbein draws on primate behavior research

archaeological research and data gathered from the human relations area files to argue for two separate origins he identifies two types of military organization one that developed two million years ago at the dawn of humankind wherever groups of hunters met and a second that developed some five thousand years ago in four identifiable regions when the first states arose and proceeded to embark upon military conquests in careful detail otterbein marshals evidence for his case that warfare was possible and likely among early homo sapiens he argues from comparison with other primates from paleolithic rock art depicting wounded humans and from rare skeletal remains embedded with weapon points to conclude that warfare existed and reached a peak in big game hunting societies as the big game disappeared so did warfare only to reemerge once agricultural societies achieved a degree of political complexity that allowed the development of professional military organizations otterbein concludes his survey with an analysis of how despotism in both

ancient and modern states spawns warfare a definitive resource for anthropologists social scientists and historians how war began is written for all who are interested in warfare whether they be military buffs or those seeking to understand the past and the present of humankind publisher
