the spitzer space observatory originally known as the space infrared telescope facility sirtf is the last of the four great observatories which also include the hubble space telescope the chandra x ray observatory and the compton gamma ray observatory developed over twenty years and dubbed the infrared hubble spitzer was launched in the summer of 2003 and has since contributed significantly to our understanding of the universe george rieke played a key role in spitzer and now relates the story of how that observatory was built and launched into space telling the story of this single mission within the context of nasa space science over two turbulent decades he describes how after a tortuous political trail to approval spitzer was started at the peak of

nasa s experiment with streamlining and downsizing its mission development process termed faster better cheaper up to its official start and even afterward spitzer was significant not merely in terms of its scientific value but because it stood at the center of major changes in space science policy and politics through interviews with many of the project participants rieke reconstructs the political and managerial process by which space missions are conceived approved and developed he reveals that by the time spitzer had been completed a number of mission failures had undermined faith in faster better cheaper and a more conservative approach was imposed rieke examines in detail the premises behind faster better cheaper their strengths and weaknesses and their ultimate impact within the context of nasa s continuing search for the best way to build future missions rieke s participant s perspective takes readers inside congress and nasa to trace the progress of missions prior to the excitement of the launch revealing the enormously complex and often disheartening political process that needs to be negotiated he also shares some of the new observations and discoveries made by spitzer in just its first year of operation as the only book devoted to the spitzer mission the last of the great observatories is a story at the nexus of politics and science shedding new light on both spheres as it

contemplates the future of mankind's exploration of the universe from the ancient origins of astronomy to the Copernican revolution and from Galileo to Hawking's research into black holes. The story of astronomy charts the discoveries made by some of the greatest minds in human history and their attempts to unveil the secrets of the stars. Written in an accessible and entertaining style, the story of astronomy demystifies some of the biggest breakthroughs in the history of science as well as explaining why we have 60 minutes in an hour, how the Romans bodged the invention of the leap year, and when people really discovered the Earth wasn't flat a thousand years before Columbus. In the most straightforward and compelling of ways, Peter Aughton demonstrates the beauty and wonder of what Newton, Einstein, Hubble, and Hawking really achieved.

Herbert George Wells (21 September 1866 – 13 August 1946), better known as H. G. Wells, was an English writer most famous today for the science fiction novels he published between 1895 and 1901: *The Time Machine*, *The Island of Doctor Moreau*, *The Invisible Man*, *The War of the Worlds*, *When the Sleeper Wakes*, and *The First Men in the Moon*. He was a prolific writer of both fiction and non-fiction and produced works in many genres, including contemporary novels,

history, and social commentary. Only his early science fiction novels are widely read today. Wells and Jules Verne are each sometimes referred to as the father of science fiction.

In the early 1990s, a NASA-led team of scientists changed the way we view the universe with the COBE Cosmic Background Explorer project. They showed that the microwave radiation that fills the universe must have come from the Big Bang, effectively proving the Big Bang theory beyond any doubt. It was one of the greatest scientific findings of our generation, perhaps of all time. In the very first light, John Mather, one of COBE's leaders and science writer John Boslough, tell the story of how it was achieved. A gripping tale of big money, bigger egos, tense politics, and cutting-edge engineering, *The Very First Light* offers a rare insider's account of the world of big science.

This encyclopedia traces the history of the oldest science from the ancient world to the space age in over 300 entries by leading experts.

The Country of the Blind and Other Stories by H. G. Wells is a captivating collection that showcases the author's mastery of speculative fiction and social commentary. The title story, *The*

in the twentieth century American mathematicians began to make critical advances in a field previously dominated by Europeans Harvard's mathematics department was at the center of these developments a history in sum is an inviting account of the pioneers who trailblazed a distinctly American tradition of mathematics in algebraic geometry and topology complex analysis number theory and a host of esoteric subdisciplines that have rarely been written about outside of journal articles or advanced textbooks the heady mathematical concepts that emerged and the men and women who shaped them are described here in lively accessible prose the story begins in 1825 when a precocious sixteen-year-old freshman Benjamin Peirce arrived at the college

he would become the first american to produce original mathematics an ambition frowned upon in an era when professors largely limited themselves to teaching peirce s successors william fogg osgood and maxime bôcher undertook the task of transforming the math department into a world class research center attracting to the faculty such luminaries as george david birkhoff birkhoff produced a dazzling body of work while training a generation of innovators students like marston morse and hassler whitney who forged novel pathways in topology and other areas influential figures from around the world soon flocked to harvard some overcoming great challenges to pursue their elected calling a history in sum elucidates the contributions of these extraordinary minds and makes clear why the history of the harvard mathematics department is an essential part of the history of mathematics in america and beyond

a gripping first hand account from inside the halls of congress as donald trump and his enablers betrayed the american people and the constitution leading to the violent attack on the capitol on 6th january 2021 by the house republican leader who dared to stand up to it in the aftermath of the 2020 presidential election donald trump and many around him including certain other elected republican officials intentionally breached their oath to the us

constitution they ignored the rulings of dozens of courts plotted to overturn a lawful election and provoked a violent attack on the capitol liz cheney one of the few republican officials to take a stand against these efforts witnessed the attack first hand and then helped lead the congressional select committee investigation into how it happened in oath and honor she tells the story of this perilous moment in us history those who helped trump spread the stolen election lie those whose actions preserved the constitutional framework and the risks the us faces and the worldwide implications

popular science gives our readers the information and tools to

improve their technology and their world the core belief that popular science and our readers share the future is going to be better and science and technology are the driving forces that will help make it better

a doctor's personal and unsparing account of how modern medicine's failure to understand pain has made care less effective in the song of our scars physician haider warraich offers a bold reexamination of the nature of pain not as a simple physical sensation but as a cultural experience warraich himself a sufferer of chronic pain considers the ways our notions of pain have been shaped not just by science but by politics and power by whose suffering mattered and whose didn't he weaves a provocative history from the renaissance when pain transformed into a medical issue through the racial legacy of pain tolerance to the opiate epidemics of both the nineteenth and twenty first centuries to the cutting edge of present day pain science the conclusion is clear only by reckoning with both pain's complicated history and its biology can today's doctors adequately treat their patients suffering trenchant and deeply felt the song of our scars is an indictment of a broken system and a plea for a more holistic understanding of the human body

this volume discusses different aspects of greece's political economy during the past decade and reflects on the country's path ahead examining the major question did this challenging period succeed in providing a window of opportunity for deeper institutional and societal change the authors seek to contribute to the discussion of the dynamics of stability and change of the nexus between external pressure and domestic agency greece offers a most interesting case study as much in analytical as in empirical terms never before did a euro area member require three macroeconomic adjustment programmes under stringent policy conditionality and external supervision this experience shattered past certainties and reshaped the political landscape a decade later greece was starting to recover and received international recognition for its reform efforts however the covid 19 pandemic provided an external shock that risks derailing such achievements the volume includes chapters by academics and researchers from different professional backgrounds history economics public law political science public administration and political economy their diverse experience and viewpoints contribute to multidimensional analyses in subject areas such as greece's constitutional structure public sector reforms labour market developments china's expanding investment footprint and

product market reforms
