interaction between language and cognition remains an unsolved scientific problem what are the differences in neural mechanisms of language and cognition why do children acquire language by the age of six while taking a lifetime to acquire cognition what is the role of language and cognition in thinking is abstract cognition possible without language is language just a communication device or is it fundamental in developing thoughts why are there no animals with human thinking but without human language combinations even among 100 words and 100 objects multiple words can represent multiple objects exceed the number of all the particles in the universe and it seems that no amount of experience would suffice to learn these associations how does human brain overcome this difficulty since the 19th century we know about involvement of broca s and wernicke s areas in language what new knowledge of language and cognition areas has been found with fmri and other brain imaging methods every year we know more about their anatomical and functional effective connectivity what can be inferred about mechanisms of their interaction and about their functions in language and cognition why does the human brain show hemispheric i e left or right dominance for some specific linguistic and cognitive processes is understanding of language and cognition processed in the same brain area or are there differences in language semantic and cognitive semantic brain areas is the syntactic process related to the structure of our conceptual world chomsky has suggested that language is separable from cognition on the opposite cognitive and construction linguistics emphasized a single mechanism of both neither has led to a computational theory so far evolutionary linguistics has emphasized evolution leading to a mechanism of language acquisition yet proposed approaches also lead to incomputable complexity there are some more related issues in linguistics and language education as well which brain regions govern phonology lexicon semantics and syntax systems as well as their acquisitions what are the differences in acquisition of the first and second languages which mechanisms of cognition are involved in reading and writing are different writing systems affect relations between language and cognition are there differences in language cognition interactions among different language groups such as indo european chinese japanese semitic and types different degrees of analytic isolating synthetic inflected fused agglutinative features what can be learned from sign languages rizzolatti and arbib have proposed that language evolved on top of earlier mirror neuron mechanism can this proposal answer the unknown questions about language and cognition can it explain mechanisms of language cognition interaction how does it relate to known brain areas and their interactions identified in brain imaging emotional and conceptual contents of voice sounds in animals are fused evolution of human language has demanded splitting of emotional and conceptual contents

and mechanisms although language prosody still carries emotional content is it a dying off remnant or is it fundamental for interaction between language and cognition if language and cognitive mechanisms differ unifying these two contents requires motivation hence emotions what are these emotions can they be measured tonal languages use pitch contours for semantic contents are there differences in language cognition interaction among tonal and atonal languages are emotional differences among cultures exclusively cultural or also depend on languages interaction of language and cognition is thus full of mysteries and we encourage papers addressing any aspect of this topic

often when water is thought about the focus is on problems challenges and crises in november 2012 a group of researchers came together at queen s university with the idea that it is more illuminating and constructive to think about water as an opportunity water as a social opportunity conveys the idea that the ways in which society responds to water related challenges has the potential to yield a variety of positive outcomes not just for water or the economy but for society more broadly contributors consider water issues across canada from this original perspective and suggest this concept as a basis for developing a long overdue national water strategy in canada

passionate and cogent this could be the most important book of the year for Canadians we are complacent we bask in the idea that Canada holds 20% of the world's fresh water water crises face other countries but not ours we could not be more wrong in boiling point bestselling author and activist Maude Barlow lays bare the issues facing Canada's water reserves including long outdated water laws unmapped and unprotected groundwater reserves agricultural pollution industrial waste dumping boil water advisories and the effects of deforestation and climate change this will be the defining issue of the coming decade and most of us have no idea that it is on our very own doorstep Barlow is one of the world's foremost water activists and she has been on the front lines of the world's water crises for the past 20 years she has seen first hand the scale of the water problems facing much of the world but also many of the solutions that are being applied in boiling point she brings this wealth of experience and expertise home to craft a compelling blueprint for Canada's water security

this important work will serve to change irrevocably the course nature and future of management education for the first time the foundations of management are brought to life through historical analysis never attempted or achieved before the book takes the reader on a journey through almost the whole of human history viewed from a management perspective the study of management will be utterly transformed by this daringly innovative new paradigm for the understanding of the types of human management the different approaches practices and systems and their development over time the book also provides a summation of the author's accumulation of over two decades of experience and knowledge in management education and three decades of applied action in the world of business

in recent years there has been a growing body of evidence from fields such as public health architecture ecology landscape forestry psychology sport science psychiatry geography suggesting that nature enhances psychological health and wellbeing physical activity in the presence of nature feelings of connection to nature engagement with nature specific environmental features e.g. therapeutic water and trees and images of real and virtual nature have all been posited as important wellbeing facilitators thus the association between natural environments and health outcomes might be more complex than initially understood Pritchard Richardson Sheffield McEwan 2019 despite the number of studies showing improvements in psychological health and wellbeing through nature based physical activities or feelings of connection to nature the exact role and influence of the natural environment in this process is still rather unclear Brymer Davids Mallabon 2014 Karmanov Hamel 2008 research is also beginning to consider the importance of individual differences meaning and the person environment relationship Freeman Akhurst Bannigan James 2016 Freeman Akhurst 2015 in the development of wellbeing and health outcomes furthermore traditional theoretical notions such as biophilia topophilia restoration theories and stress reduction theories typically used to interpret findings are also being critiqued often one of the main barriers for practitioners is the vast array of theories that claim to effectively explain research findings but that tend to be only

partially relevant e.g. for physical activity or restoration focus on the characteristics of the person e.g. nature relatedness and only some features of the landscape e.g. therapeutic landscapes this special edition therefore brings together cutting edge ideas and research from a wide set of disciplines with the purpose of exploring interdisciplinary or trans disciplinary approaches to understanding the psychological health and wellbeing benefits of human nature interactions
