this book provides an innovative insight into the regulatory conundrum of genetically modified organisms gmos deploying transnational legal analysis as a methodological framework to explore the most controversial area of risk governance the book deconstructs hegemonic and counter hegemonic transnational narratives on the governance of gmo risks cutting across us law eu law the wto agreement on sanitary and phytosanitary measures and hybrid standard setting regimes should uncertain risks be run unless adverse effects have been conclusively established and should regulators only act where this is cost benefit effective should risk managers make a convincing case that a product or process is safe enough for the relevant

---

uncertain risks to be socially acceptable how can intractable transnational regulatory conflicts be solved the book complements a close analysis of regulatory frameworks and case law with a more encompassing perspective on the political socio economic and distributional implications of different approaches to the regulation of health and environmental risks at times of globalisation the gmo deadlock thus becomes a lens through which to investigate the underlying value systems goals and impacts of transnational discourses on risk governance against this backdrop the normative strand of analysis points to the limited ability of science and procedural deliberation to generate authentic agreement and to identify normatively legitimate solutions in the absence of pre existing shared perspectives

the aim of this collection of essays in robin churchill s honour is to discuss some key examples of the achievements of international law with the express aim of exploring both what it has achieved and also its limits this will serve as a response to the two popular but opposite misconceptions about the role of international law one view is that international law is too weak to improve the world in any significant way the other view is that international law is a panacea that can be used to rid the world of many of its ills the book is divided into five distinct parts each reflecting on what international law has achieved within broadly defined substantive areas it opens with a discussion on general international law and international human rights law before exploring the law of the sea and fisheries it then looks at international environmental law before finally examining the use of force and international criminal law the chapters and the collection overall will provide a contrast to the popular misconceptions about international law by offering examples of both the success and also limitations of it as a system
