the automotive sector has taken a keen interest in lightweighting as new required performance standards for fuel economy come into place this strategy includes parts consolidation design optimization and material substitution with sustainable polymers playing a major role in reducing a vehicle's weight sustainable polymers are largely biodegradable biocompatible and sourced from renewable plant and agricultural stocks a facile way to enhance their properties so they can indeed replace the ones made from fossil fuels is by reinforcing them with fibers to make composites natural fibers are

gaining more acceptance in the industry due to their renewable nature low cost low density low energy consumption high specific strength and stiffness co2 sequestration potential biodegradability and less wear imposed on machinery biocomposites then become a very feasible way to help address the fuel consumption challenge ahead of us this book entitled biocomposites in automotive applications is segmented into three sections and includes eleven hand picked technical papers covering processing and characterization of biocomposites automotive applications of biocomposites a perspective on automotive sustainability it is a must read for those interested in the growing importance of composites used in automotive applications and their impact on sustainable mobility

the mbr market continues to experience a massive growth the best practice in the field is constantly changing and unique quality requirements and management issues are regularly emerging the second edition of membrane

biological reactors theory modeling design management and applications to wastewater reuse comprehensively covers the salient features and emerging issues associated with the mbr technology the book provides thorough coverage starting from biological aspects and fundamentals of membranes via modeling and design concepts to practitioners perspective and good application examples in the second edition the chapters have been updated to cover the recently emerged issues particularly the book presents the current status of the technology including market drivers restraints and development trend process fundamentals both the biological and membrane components have received in depth coverage in the new edition a new chapter has been added to provide a stronger focus on reuse applications in general and the decisive role of mbr in the entire reuse chain the second edition also comes with a new chapter containing practical design problems to complement the concepts communicated

throughout the book other distinguishing features of the new edition are coverage of novel developments and hybrid processes for specialised wastewaters energy efficiency and sustainability of the process aspects of mbr process automation and recent material on case studies the new edition is a valuable reference to the academic and professional community and suitable for undergraduate and postgraduate teaching in environmental engineering chemical engineering and biotechnology
