given the increasing number of old people the

proliferation of books about old age is hardly surprising most of these come from cultural historians or social scientists and when those with a literary background have tackled the subject they have largely done so through what are known as period studies in blasted with antiquity david ellis provides an alternative skipping nimbly from cicero to shakespeare and from wordsworth to dickens and beyond he discusses various aspects of old age with the help of writers across european history who have usually been regarded as worth listening to eschewing extended literary analyses ellis addresses retirement physical decay sex in old age the importance of family legacy wills and nostalgia as well of course as dying itself while remaining alert to current trends his approach is consciously that of the old way of teaching english rather than the new whether blasted with antiquity like falstaff in henry iv part two or with the shining morning face of an unwilling student his accessible and witty style will appeal to young and old alike

in an outer arm of the spiralling milky way galaxy can be seen an insignificant speck this is our home planet earth its skies clouds lands and seas and indeed life itself have long drawn the interest of scientists and artists alike our cultural and scientific history is evidence enough that curiosity and wonder are the twin drivers of both scientific and artistic imaginations in science and sensibility david howe unveils the stories of

the scientists who helped to make sense of the stars clouds life rocks and the elements and weaves their tales with the thoughts and feelings of artists who found meaning as they experienced nature s beauty grandeur and mystery scientific greats such as james hutton charles darwin dmitri mendeleev gregor mendel and annie jump cannon all the way up to today s leading scientists are complemented by the literary insights of people such as william wordsworth jorge luis borges and iris murdoch readers are encouraged to embrace what the sciences and the arts can reveal together in doing so the earth below and the heavens above become brighter and richer the wonder and curiosity embodied in science and sensibility could perhaps take us a step closer to holding infinity in the palm of your hand and eternity in an hour
